 Motivator Tips

Eating with our eyes is one of reasons we eat the way we do. We visually get stimulated, and then we make decisions both consciously and subconsciously. If food looks good, there is a better chance of it getting eaten, and the converse is

also true. The funny part is, that the depending on how food is arranged or presented can change the overall appeal of what are eyes are telling are mind about the food.

Plating food doesn't have to be detailed like a five-star restaurant but it should be presented in a way that makes all the components attractive. Think of it like putting a puzzle together. All the pieces of the puzzle need to be in place for the puzzle to be completed. Just like plating of food, all the components are important for the end product to be complete.

Presentation of food starts with choosing the right plates. In senior centers, most often the divided tray is the option most use, and some are really are stuck on this option. Understandably, the divided tray is convenient and keeps the food separate. It is one of the most undesirable and bulky for presentation which then relates to overall lower satisfaction with the meal. However, this option is common and sometimes liked by some of the seniors.

Page 2 Food and Fitness

Plating for Simple Satisfaction Success

(Continued from Page 1)

Choosing the right plate for presentation comes down to size and color. Plates that are to large make the amount of food being served look inadequate which is what often happens with the divided tray. Serving the same amount of food on a plate that is just the right size makes the portions no longer look so small. In addition, the plates should not be so small that the food is over crowed either. As for color, white plates are the most popular. Just about any food looks desirable on a white plate. White plates create a high contrast and a neutral background to highlight the food.

Placement of food is the next point to consider. Depending on how you like to eat your food will change how you choose to plate your food. The hardest part of plating is for those who do not like their food to mix or touch. Plating and not having food touch can be more of a challenge. The key points are the amount of foods and not overcrowding. The general rule for serving in amounts is serving in odd numbers. Odd amounts give a feeling of more food than even number amounts, and this should only be applied to the items that you can visually count under twelve. Example: serving seven pieces of cantaloupe.

If you have the creative gene, and want to explore more ways to make the presentation at a higher level, paying attention to details like color contrast, height of foods, making it fancy with sauces, and garnishing with edibles like lemons and herbs are great methods for adding a little extra flair. No matter how we choose to plate our food or how we choose to eat it, we always eat with our eyes first. By putting in even the smallest effort to make the food look better, it will give a better satisfaction over the food that is carelessly placed on a plate.

 $\overline{ ext{VS}}$

plate often creates an impression for diners. Aroma & I. The plating, garnishing & arrangement of food on a flavor can be negated or enhanced by it.

2. Keep it simple. Elaborate plates can be just as bad as careless ones. Also, complicated plates can make both hot plates and cold plates into warm plates.

variety and contrast, while avoiding combinations that 3. Maintain balance with foods & garnishes that offer are awkward or jarring in color, shape or flavor.

plates. Serve cold food cold, on cold plates. Make sure Maintain temperature: Serve hot foods hot, on hot that everyone in a party is served together.

5. Protein is usually considered the main item on the plate. Avoid excessive garnish or huge portions of vegetables/starches. Strive for balanced portions.

Varied, balanced texture is important. For example, avoid serving all soft foods in a course, e.g. baked meatloaf, whipped potatoes & pureed squash.

consider when balancing colors, shapes, and textures 7. Flavors are not visual, but this is another factor to on the plate. First, don't disgust.

The more anxious a diner is to dig into the food placed before her, the more likely she is to like it. Food that is arranged properly is key.

 Small plates can cause an overcrowded, jumbled, look skimpy. Balance on the plate is also important. messy appearance. Large plates can make portions

than just one. Chicken, white beans, and cauliflower vs

roasted peppers and saffron chicken on spinach.

9. 2-3 colors on a plate are usually more interesting

11. A variety of shapes is important. A plate of Brussels sprouts, meatballs and new potatoes might benefit from green beans or carrots in rounds or dice.

Fruit—Cherry

Cherries belong in the Prunus genus which consists of flowering shrubs or trees in the rose family. The Prunus genus has more than 400 species and some of these includes almond, peach, plum, cherry, and apricot trees.

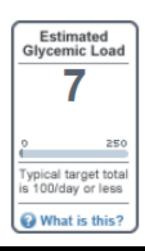

Cherry trees are grown around the world. The best areas for cherry trees are places where the winter weather does not get to sever but have a mild winter. The winter weather is necessary for the trees to blossom in the early spring. Every tree produces about 7000 cherries each year. In the US, Michigan is the top producer, growing about 75% of the cherries from the US.

Cherries, just like most fruits, are fat-free, sodium free, and cholesterol free. Cherries are a good source of Vitamin C and potassium. The darker cherries provide higher levels of antioxidants and vitamins than the lighter ones.

Recipe— Cool Summertime Overnight Oatmeal

Ingredients

- 1-1/3 cup old fashioned oats
- 3/4 cup fat-free milk
- 3/4 cup (6ounces) reduced-fat plain yogurt
- ◆ 114 cup honey
- 1 cup pitted fresh or frozen cherries
- 1 cup fresh or frozen blueberries
- 1/2 cup chopped walnuts, toasted

Directions

- In a small bowl, combine oats, milk yogurt and honey. Refrigerate, covered, overnight.
- 2. Top each serving with cherries, blueberries and walnuts.

NOTES:

To make individual grab-and-go servings:

Stir together 1/3 cup oats, 3 Tbsp. each milk and yogurt, and 1 Tbsp. honey in a resealable glass jar. Top with fruit and nuts; seal and refrigerate overnight.

To toast nuts:

Bake in a shallow pan in a 350° oven for 5-10 minutes or cook in a skillet over low heat until lightly browned, stirring occasionally.

Beware of Fad Diets

By Lauren Weatherford, WVU Extension Agent -**Fayette and Nicholas Counties**

Monthly Challenge: Pick a health fad that interests you. Study the pros and cons, and share what you learned with the group.

Why do fad diets continue to be so popular? Fads offer something new that promises fast and easy fitness or weight loss. The truth is that achieving weight loss and fitness requires consistent and sustained effort.

Here are some important tips:

- Diets that seem too good to be true, probably are. A healthy lifestyle takes time and effort.
- Always use trusted resources, such as sites ending in .gov, .org or .edu. The information will likely be research- and evidence-based. A reliable source for nutrition and physical activity information is www.choosemyplate.gov.
- Do your research to see if a diet or fitness tool is proven to be effective. For reliable reviews of many popular diets, read the "U.S. News & World Report Best Diet Rankings" at https://health. usnews.com/best-diet.
- Avoid recommending diets to family and friends. While one diet may be perfect for you, someone else may have a health problem that could make your diet extremely dangerous for them. Always ask your health care provider before changing your diet.

Quick Club Activity: True or False?

List a variety of health fads (include some crazy fads and some good health practices). If it is a crazy health fad (not true), have the group stand up or march in place. If it is a good health practice or movement, have the group do a stretch. Feel free to add your own fads or healthy behaviors to the game, but make sure they are from accurate and trustworthy sources!
